

Topic constructor

- 1. Write a class with a default constructor and display a message inside it.**
- 2. Create a class with a parameterized constructor to initialize instance variables. Implement method overloading in constructors by creating multiple constructors with different parameters.**
- 3: Create a class with a default constructor and another constructor that takes an integer parameter to initialize an instance variable.**
- 4. Demonstrate the use of this keyword inside a constructor.**
- 5. Create a class with a constructor that calls another constructor using this() keyword. Design a class with private instance variables and initialize them using a constructor.**
